**Papertech Installs first WebInspector® WebLED beam for Arctic Paper, Grycksbo upgrade on PM10**

Vancouver, Canada (13, Nov 2014) - Papertech is pleased to announce that the first of two WebInspector® web inspection (WIS) system upgrades has been completed at the Arctic Paper, Grycksbo mill in Sweden. The existing Cognex camera beam has been fitted with new high definition digital matrix GigE cameras from Allied Vision and Papertech’s CleanJet lens cleaning system. This upgrade also marks the introduction of our new WebLED inspection beam, in this case providing high powered, pulsed transmission lighting.

The first of two on PM10, this WebInspector® will upgrade the pre-coater. The after coater WIS unit will follow using the same components. PM10 produces over 150,000 tons/year or high quality coated art papers, is 4.3 meters wide, and operates at speeds up to 1300m/min. PM10 was also upgraded to a digital WebVision® web monitoring system (WMS) last year with 12 cameras. This is now TotalVision™ integrated with the new WebInspector® into a single unified platform allowing easy and rapid defect to source analysis.

Since its introduction in 2004, WebInspector®, has proven to provide effective 100% sheet defect analysis on all types of paper grades. WebInspector® is uniquely designed to upgrade aging WIS units by utilizing existing structures to significantly reduce the cost of the upgrade. Similar upgrades have been successfully completed on ABB and Roibox (Honeywell) WIS units.

The Grycksbo mill is Papertech’s oldest European customer with our first delivery taking place in 2000 for PM10. Since then Papertech has supplied WebVision systems to PM9 (2001) and PM7 (2004). The latest PM10 order includes an option for a WebInspector for PM7.

About Arctic Paper: Has a long tradition in papermaking. Together our four mills within the Arctic Paper S.A Group have many years of experience and expertise in making fine paper. Arctic Paper Grycksbo began in 1740, Arctic Paper Mochenwangen GmbH was established in 1868 with Arctic Paper Munkedals AB three years later and the mill in Kostrzyn in 1958. We are a paper group with a dedicated passion for making superior graphic fine paper for demanding fine paper users. See more at: http://www.arcticpaper.com

About Papertech Inc: we are the industry-leading machine vision system supplier for web-based production lines. There are now over 700 TotalVision™ installations in 35 countries, with a record 80 systems sold in 2013. Papertech’s unified TotalVision platform, combining event capturing (WMS) and web inspection (WIS), helps papermakers and tissue producers around the world optimize paper quality and production efficiency.
