

**Service:** Includes pre-engineering, installation, system optimization and maintenance of Papertech's TotalVision™ or any other system for maximum lifelong results.

**Cameras:** Digital, monochrome or color in a wide variety of options including high frame rate, high resolution or high sensitivity.

**Lenses:** Wide-range of application specific camera lenses for variety of magnifications, view angles and lighting.

**Camera Housings:** Application specific protective covers and effective air cooling/cleaning for use in any operating environment.

**Lights:** In-house engineered selection of LED, HID (high intensity discharge) and high output fluorescent lights.

**Brackets:** Stainless steel, modular (add components to suit) and available in fixed or temporary-use formats (quick-disconnect, hinged or articulating).

**TotalVision™ (Software):** Comprehensive event capturing software suite enabling efficient analysis of root cause production or quality defects. Additional options include real-time analysis, web inspection, pattern matching and TotalVision™ integration with mill-wide system for ease of data-entry and analysis.

**Core System:** Standard design includes an OPC capable server, capture computers, network infrastructure, and an uninterruptible power supply (UPS). Options available for various cabinet cooling systems, hard-wired I/O and other installation specific requirements.

**TotalVision™**
